[Known in this form only from 16th c.; but OE. had in the same sense a word variously read (in pl.) *pinewinclan* and *winewinclan* (owing to confusion of the letters p and p = *w*). The MSS. favour the latter, which may however be a scribal error, as *pinewincle* would explain the 16th c. literary, and mod. dial. forms. In any case the second element is the same. It is noteworthy that the first certain appearance of *per-*, *periwyncle*, agrees so closely with that of *perwyncle*, PERIWINKLE *sb.*[1], from ME. *parvenke*, *perwynke*, as if in some way **pinewincle* and *perwinke* had coalesced in the form *perwyncle*, *periwinkle*.]

The action of swearing to a statement which is known to be false, or of taking an oath which it is not one's intention to keep; *spec.* in *Law*, The crime of wilfully uttering a false statement or testimony in reference to a matter material to the issue involved, while under an oath or affirmation to tell the truth, administered by a competent authority; the wilful utterance of false evidence while on oath.

In legal usage, perjury was first the offence of jurors in giving a wilfully false verdict, they being sworn to give a true verdict according to their knowledge; as an offence of witnesses it was apparently gradually evolved in connexion with the change in the nature of Trial by JURY (q.v.); 'there is no trace in the statutes, or in the reported proceedings of the courts, of any penal law against perjury in witnesses, as distinguished from that of jurors, earlier than the reign of Henry VIII' (*Penny Cycl.* XVII. 459/2; but see quot. 1495. permeability (ˌpɜːmɪə'bɪlɪtɪ). [f. PERMEABLE + -ITY: in F. *perméabilité* (1625 in Hatz.-Darm.).]

1. a. The quality or condition of being permeable; capability of being permeated; perviousness. Also, the degree to which a solid allows the passage of fluid through it, measured by the *coefficient of permeability* (or *permeability coefficient*), the volume of fluid flowing through unit cross-section in unit time under a unit (pressure or concentration gradient).

1759 WILSON in *Phil. Trans.* LI. 328 Confirmations of the permeability of glass. 1805 W. SAUNDERS *Min Waters* 487 The permeability of the skin to heat. 1882 GEIKIE *Text-bk. Geol.* III. II. ii. §2. 351 The permeability of subterranean rocks. 1902 *Sci. Abstr.* V. 856 (*heading*) Permeability of animal membranes. *Ibid.* 857 Inactive membranes.. offer but little resistance to the passage of the different ions, and the permeability does not alter by contact with the solution. 1917 *Rep. & Mem. Advisory Comm. Aeronaut.* No. 317. 4 This permeameter is readily adapted to the determination of temperature coefficients of permeability. 1920 *Ibid.* No. 360. 4 The average permeability of rubbered airship fabrics .. is not usually much less than 10 litres per sq. metre per day. 1931 *Jrnl. Gen. Physiol.* XIV. 408 This definition of permeability is seen to possess a definite physical meaning *viz.*, the number of cubic micra of water entering the cell per minute per unit area of membrane, per atmosphere of difference in osmotic pressure between interior and external medium. 1960 *Ibid.* XLIII. 523 (*heading*) Experimental study of the independence of diffusion and hydrodynamic permeability coefficients in collodion membranes. 1962 R. C. S. WALTERS *Dam Geol.* xiv. 67 The permeability [of the Oxford clay] ranged from 12×10^{-6} to $4{\cdot}1 \times 10^{-6}$ cm per sec. 1966 *McGraw-Hill Encycl. Sci. & Technol.* XII. 453/2 The permeability coefficient varies from 100 cm/sec for clean gravel to 10^{-9} cm/sec for heavy clay.

b. *magnetic* (etc.) *permeability*: see quot. 1872. (*magnetic*) *permeability*, also, one of the physical parameters of a medium, equal to the ratio of the magnetic induction B to the magnetic field strength H at any point in it; also (more fully *relative permeability*), the ratio of the permeability of a medium to the permeability of free space; *permeability of free space*, a constant μ_0 which in the C.G.S. electromagnetic system of units is unity and in the International System of Units is defined as a base quantity with the value $4\pi\ (12{\cdot}57) \times 10^{-7}$ henry per metre.

Of the different permeabilities mentioned in quot. 1872, the magnetic kind is the only one that has gained currency.

1872 THOMSON in *Papers Electrostatics & Magn.* 484 We have thermal permeability, a synonym for thermal conductivity; permeability for lines of electric force, a synonym for the electro-static inductive capacity of an insulator; magnetic permeability, a synonym for conducting power for lines of magnetic force. 1892 J. A. EWING *Magn. Induction* ii. 56 Prof. Knott has proposed to call this quantity the 'differential susceptibility'; similarly $d\mathrm{B}/d\mathrm{H}$ may be called the differential permeability. 1896 BEDELL *Princ. of Transf.* 40 The reluctance, R, or magnetic resistance.. varies.. inversely as the cross-section and permeability. 1939 L. F. BATES *Mod. Man.* ii. 67 Pure iron has an initial permeability of about 250. 1942 *Phil. Mag.* XXXIII. 488 The universal constant $1/ac^2$ occurring in (12.2) has the value.. $1/10^7$ ohm sec./m. .. and is called the permeability of empty space. Consistency practically compels us to call the constant μ/ac^2 in (12.3) the permeability of the medium. 1944 [see PERMITTIVITY]. 1962 CORSON & LORRAIN *Introd. Electromagn. Fields* v. 177 The constant μ_0 is called the permeability of free space and is arbitrarily taken to be exactly $4\pi \times 10^{-7}$ newton/ampere^2 in rationalized m.k.s. units. *Ibid.* vii. 284 Figure 7-17 shows magnetization data for several different kinds of iron, with lines of constant relative permeability indicated. The detailed shape of the magnetization curve and the maximum permeability achieved with a given sample of iron depend on the purity, the method of annealing, and on the thickness of the sheets. 1971 *Nature* 16 July 208/2 The indiscriminate use of the symbol μ.. both for the permeability of free space and that of ferromagnetic materials may temporarily confuse the unwary.

2. Special Comb.: **permeability tuning** *Electronics*, tuning in which the resonant frequency of a circuit is changed by moving a magnetic core into or out of a coil forming part of it, so as to change its inductance.

1933 W. J. POLYDOROFF in *Proc. IRE* XXI. 694 The apparent inductance is increased to tune to lower frequencies by introducing a magnetic core into the field of the coil. As the core is inserted into the coil, more lines of the magnetic field are intercepted by the core, and, in effect, the average apparent permeability of the medium surrounding the coil increases from 1 (for air) to a certain maximum... For this reason, and for other reasons.., it is appropriate to describe this method as 'Permeability Tuning'. 1968 *Radio Communication Handbk.* (ed. 4) iv. 35/2 Although permeability tuning has been most successfully used for many years by one major American company, the mechanical and electrical complications involved in band-switched receivers have resulted in little progress in this field by amateur constructors.

Hence ˌ**permeabili'zation**, the action of permeabilizing.

1973 *Nature New Biol.* 2 May 18/1 The synthesis observed is due to the growth of newly initiated chains, not merely the extension of chains initiated during normal growth before permeabilization. 1973 *Developmental Biol.* XXXV. 386/2 The permeabilization of the vitelline membrane of *Drosophila* eggs with octane offers the opportunity to study the influence of different substances on development and facilitates cytochemical investigations of the egg. 1974 *Jrnl. C. MOORE et al. *Invertebr. Fossils* i. 4/1 Shells and bones, which are somewhat porous, may be made more dense by deposition of mineral substances by ground water. FENTON *Fossil Bk.* i. 5 This process [*sc.* petrification]..takes place in two related ways. b. In the semantic theories of Nils Gustaf Stern: see quot. 1931.

1931 G. STERN *Meaning & Change of Meaning* xiii. 361 Permutations are unintentional sense-changes in which the subjective apprehension of a detail—denoted by a separate word—in a larger total changes, and the changed apprehension (the changed notion) is substituted for the previous meaning of the word. 1933 *Mod. Lang. Notes* XLVIII. 386 The linguistically conditioned changes are.. analyzed into shifts of..'permutation' and 'adequation'. 1965 *Eng. Stud.* XLVI. 405 The type of semantic change involved is that called by Gustaf Stern 'permutation'.

2. *Psychol.* **a.** The tendency for an activity to be persevered with or repeated after the cessation of the stimulus to which it originally responded, studied as an aspect of behaviour.

[**1901** *Brain* XXIV. 620 G. E. B. WEINER *Psychodiagnosis in Schizophrenia* iv. 36 In 'fixed concept' perseveration a response that accurately corresponds to a blot when first given is repeated on subsequent blots without regard for actual blot qualities. **1976** M. 6. *Law.* Opposed to *real*: **†a.** originally, in *personal action* (or *plea*), an action wherein the claim was not the restitution of a specific thing (since the thing might be destroyed, concealed, or transported beyond the reach of the law) but the recovery from the *person* concerned of compensation, i.e. of damages; distinguished from a *real action*, which claimed the restitution of the thing itself (being something indestructible and irremovable), and from a *mixed* action in which both restitution and damages were demanded. (This distinction is *Obs.*, real actions having fallen out of use early in 17th c., and been formally abolished in 1833. See Sweet *Dict. Eng. Law* 24.) Hence **b.** *personal property* (*estate*, etc.), things recoverable in the personalty or by a personal action, i.e. chattels and chattel interests in land, etc., as opposed to *real property* (*estate*, etc.), i.e. things recoverable in the realty, or by a real action; viz. land (in the legal sense: see LAND 4 c), and rights attached to the possession of land. *personal property* therefore includes generally all property except land and those interests in land which pass on the owner's death to his heir; corresponding in general (though not entirely) to the *movables* of Scotch, Continental, and Anglo-Indian law.

Personal and *real action* represent L. *actio in personam* and *actio in rem* of the Roman law, in which actions were distinguished by the nature of the right thereby asserted; the terms were taken by Bracton into English Law, but employed in a different way, to distinguish actions according to the process of execution obtained, that is, in reference not to the right asserted but to the relief afforded therein. The thing sought by Britton's *actio in rem* was restitution of a specific thing which the law was always able to lay hold of and hand over; this limited it to land and rights exercisable over or in respect of land. But land and its rights were hereditary possessions, descending to the owner's heirs, hence *real property* became coextensive with or equivalent to heritable property, and *personal property* came to include all other property; this again reacted upon the definition, inasmuch as the question whether any particular property was hereditary and passed to the heir, or was non-hereditary and passed to the executors or administrators, became the test whether the property or estate was real or personal; so that certain rights attached to land, came to be treated as *real* or *personal*, not according to the original application of these words, but according to the rule which had been established as to the descent of these rights severally. Thus leases, of whatever duration, as well as mortgages and securities for money affecting lands or heritable property, which in Scotland are themselves heritable and descend to the heir, in England go to the personal representative, and are classed as personal estate. (See T. Cyprian Williams in *Law Quarterly* IV. (1888); Pollock and Maitland *Hist. Eng. Law* II. 179–80, 568–70.)

Eng. Law* II. 180 When our orthodox doctrine has come to be that land is not owned, but that 'real actions' can be brought for it, while no 'real action' can be brought for just those things which are the subjects of 'absolute ownership', it is clear enough that the 'personalness' of 'personal property' is a superficial phenomenon.

c. *personal contract, injury, law, representative*: see quots.

personology (pɜːsɒ'nɒlədʒɪ). *Psychol.* [f. PERSON *sb.* + -OLOGY.] A term sometimes used for the study of personality. So **persono'logical** *a.*; **perso'nologist**, one who studies personality.

1926 J. C. SMUTS *Holism & Evolution* x. 262 Personality is, in fact, largely an unexplored subject and requires a discipline to itself as a real factor in the universe. 'Characterology' has been suggested as a name for the new discipline, but there are objections to it, and Personology is suggested as a better name. The 'Person' is a concept of the Roman law, not of Greek philosophy, and the hybrid is therefore justified. 1938 H. A. MURRAY *Explorations in Personality* i. 4 The branch of psychology which principally concerns itself with the study of human lives and the factors that influence their course, which investigates individual differences and types of personality, may be termed 'personology' instead of 'the psychology of personality' a clumsy and tautological expression. *Ibid.* 8 Since the latter [*sc.* psychic impulses] are intangible, personologists must imagine them. 1951 J. S. BRUNER in Blake & Ramsey *Perception* v. 121 The perception-centered approach takes as its primary focus of interest the variables of perception and studies the way these are affected by various learnings, motivational states, personological structures, etc. 1957 HALL & LINDZEY *Theories of Personality* v. 157 The focus of this theory is upon the individual in all his complexity and this point of view is highlighted by the term 'personology'. 1967 R. persorption (pə'sɔ:pʃən). *Chem.* [f. PER(MEATION + SORPTION.] Sorption in which molecules of a gas enter pores in a solid that are only a little larger than themselves.

1930 McBAIN & BRITTON in *Jrnl. Amer. Chem. Soc.* LII. 2220 The sorbed molecules of nitrogen must be so intimately surrounded by the atoms of carbon with which they are in contact that the designation 'adsorption', which implies a surface, becomes a misnomer. There is very little difference in such a case between adsorption and absorption; and if a precise word to describe sorption by charcoal were required, the new term 'persorption' might be coined. 1948 GLASSTONE *Textbk. Physical Chem.* (ed. 2) xiv. 1204 It is probable that persorption is operative in the highly active charcoals, and perhaps to some extent in silica gel; the occlusion of hydrogen by palladium..may well be an extreme case of combined activated adsorption and persorption. 1960 A. W. ADAMSON *Physical Chem. of Surfaces* xi. 523 What might be considered to be a limiting or extreme case of persorption is the formation of clathrate compounds.

Without qualification, usually denoting *linear perspective*, an application of projective geometry, in which the drawing is such as would be made upon a transparent vertical plane (*plane of delineation*) interposed in the proper position between the eye and the object, by drawing straight lines from the position of the eye (*point of sight*) to the several points of the object, their intersections with the plane of delineation forming the corresponding points of the drawing.

‖**Peshito** (pə'ʃi:təʊ), **Peshitta** (pə'ʃi:tta), *a.* and *sb.* Also 8-9 Peschito, 9 Peshitto. [Syriac *p'shīṭâ, -ṭô, p'shīṭtâ, -tô*, 'the Simple' or 'Plain'.] The name given to the principal version of the Old and New Testaments in the ancient Syriac tongue, sometimes styled the Syriac Vulgate.

The two Syriac forms are respectively masc. and fem. of the adj. in the emphatic state, the latter agreeing with *mappaqtâ, -tô*, 'version'. (The final *â* and *ô* represent the same vowel in Eastern and Western Syriac pronunciation respectively.) So far as is known the name appears first in Moses Bar Kepha, 813-903. The date of the Peshito has been variously put; the prevalent opinion is that the translation of the O.T. was made from Hebrew at an early date, and that the Peshito N.T. was a revision or recension made early in the 5th c., of a translation going back, in part at least, to the 2nd c., earlier forms of which are preserved in the Sinaitic and Curetonian MSS. Later versions, more verbally rendering the Greek, were the Philoxenian and Heraclean.

C. BURKITT in *Encycl. ‖**peshwa** ('pe:ʃwa:). Forms: 7 peshua, 8 paish-, 9 peish-, peesh-, peshwa(h. [Pers. *pēshwā* chief.] The appellation of the chief minister of the Mahratta princes (from *c*1660), who made himself in 1749 the hereditary sovereign of the Mahratta state.

The princes deseended from *Sevajī* beeame *rois fainéants*, the administration being in the hands of the peshwa; in 1749 the holder of the office, Balajī Bishenāth, seized the sovereignty and, without changing his official title, made it hereditary in his family. pet (pɛt), *sb.*[2] Also 7–8 pett. [In use since end of 16th c., first app. in the phrase 'to take the pet'; origin obscure.

It has naturally been associated with PET *sb.*[1], as being a characteristic habit of a 'pet' or indulged and spoiled child; but the connexion of sense is not very clear or simple, esp. in the early phrase 'to take the pet'. It is also to be noted that in the 16th, 17th, and early 18th c., PET *sb.*[1] was still an exclusively northern word, while PET *sb.*[2] has been app. Southern English also from the first.]

Offence at being (or feeling) slighted or not made enough of; a fit of ill humour or peevishness from this cause: now usually implying one of a slight or childish kind. *to take* (*the*) *pet*, to take offence and become ill-humoured or sulky.

2. Used in proverbial phrases in conjunction with *Paul*; esp. in *to rob* (†*borrow from*, †*unclothe*) *Peter to pay* (†*clothe*) *Paul*, to take away from one person, cause, etc. in order to pay, or confer something on, another; to discharge one debt by incurring another.

In quot. *c* 1400 we might think that there was a mere conjunction of two well-known alliterating names (cf. *Jack* and *Jill*); but something is prob. due to the association of St. Peter and St. Paul, as leading apostles and saints, and as fellow-martyrs at Rome. The phrase 'to rob Peter, etc.' may have no more specific origin; at least, the current explanation (quoted by Heylin in 1657-61) is in its details set aside by the chronology, as well as by the occurrence of the phrase in French also: cf. 1611 COTGR. s.v. *Pol*, *Descouvrir S. Pierre pour couvrir S. Pol*, to build, or inrich one Church with the ruines, or reuenues of another; also in mod.F., *décoiffer Saint Pierre pour coiffer Saint Paul*.

F. *petit*. fem. *petite* (11th c.) = Pr. and Cat. *petit*, OIt. *petitto*, *pitetto* (both in Florio, 1611). Found in Anglo-Fr. phrases or combs. from 13th c., and as an Eng. adj. in 14th c.; but before 1400 written also *pety*, later *petty*, which became the proper English form; but, beside this, *petit* continued in use, being still common in the 17th c., though little used in the 18th c., exc. as retained in legal phrases, or as influenced by modern French (in some phrases from which it still occurs). While it was still a living Eng. word the final *t* was pronounced, as shown by the frequent 16-17th c. spelling *petite*, *-yte* (in Eng. only a spelling-variant, not distinctively fem. as in Fr.). The stress varied; the alliteration and rhythm in *Piers Plowman* shows *'petit* (as does the surname *Pettit*); while the spellings *peteet*, *-eete*, show final stress.
The origin of F. *petit* is uncertain: 'the primitive type appears to have been **pittītum* or **pettītum*' (Darmest.), and as there is no such form in L., many scholars think it a derivative of a Celtic root *pett-* 'part, piece, bit', whence also It. *pezza*, F. *pièce*, Eng. *piece*. petrel ('pɛtrəl). Also 7 pitteral, 8 pittrel, petril, petteril, 8–9 peterel. [Occurs in 1676 as *pitteral*, in 1703 spelt *petrel* by Dampier, who says that the name was derived from that of St. Peter: see quot. If this was so, *petrel* may have been a formation analogous to *cockerel*, *dotterel*, *hoggerel*, *pickerel*; or might represent a Latin dim. of *Petrus* (e.g. *Petrillus*, *Petrellus*).

The name appears first in Eng.; it occurs in F. (*pétrel*) as a term of Ornithology in Brisson 1760; to Buffon 1782 it was app. an Eng. word requiring explanation. The Norwegian *Soren Peders*, and *Peders fugl* (Brunnich 1764), and Ger. *Peters vogel* are also later than the Eng. and app. suggested by it; they support Dampier's explanation. (But it is of course possible that the word had some other source, represented by *pitteral*, and that the association with *Peter* was due to popular etymology.)]

petrichor ('pɛtrɪkə(r)). [f. PETR(O- + ICHOR.] A pleasant, distinctive smell that frequently accompanies the first rain after a long period of warm, dry weather in certain regions; in quot. 1975, applied to an oily substance obtained from the ground in which this smell was concentrated.

1964 BEAR & THOMAS in *Nature* 7 Mar. 993/2 The diverse nature of the host materials has led us to propose the name 'petrichor' for this apparently unique odour which can be regarded as an 'ichor' or 'tenuous essence' derived from rock or stone. This name, unlike the general term 'argillaceous odour', avoids the unwarranted implication that the phenomenon is restricted to clays or argillaceous materials; it does not imply that petrichor is necessarily a fixed chemical entity but rather it denotes an integral odour. **1971** *Listener* 4 Nov. 612/3 No matter what kind of rock or earth was used, the oily essence always possessed the aroma of petrichor—the smell of rain falling on dry ground. **1975** *Sunday Mail* (Brisbane) 2 Nov. 32/2 CSIROs Melbourne mineral chemistry division discovered that it was not fungi or dead vegetation which produced the smell, but small yellowish-gold oily globules. The globules, nicknamed 'petrichor' or 'essence of rock' by the researchers, contained at least 50 different compounds, not unlike a perfume and were absorbed into the ground from the air.

petrogeny (pɪ'trɒdʒɪnɪ). *Petrol.* [f. PETRO- + -GENY.] = PETROGENESIS. Chiefly in *petrogeny's residua system.*

1888 TEALL *Petrography* Gloss. 448 *Petrogeny*, that department of geology which treats of the formation of rocks. **1937** N. L. BOWEN in *Amer. Jrnl. Sci.* CCXXXIII. 1 It is concluded..that in mixtures containing all of these (SiO_2, Al_2O_3, iron oxide, CaO, MgO, Na_2O and K_2O) the residual liquid from fractional crystallization will show this same character of great enrichment in alkali-alumina silicate. Since the oxides listed above make up some 97 per cent of the composition of the average igneous rock the alkali-alumina silicate system ($NaAlSiO_4$-$KAlSiO_4$-SiO_2) is here referred to as petrogeny's 'residua system'. **1948** [see MAGMATISM a]. **1950** E. E. WAHLSTROM *Introd. Theoret. Igneous Petrol.* i. 3 Petrogeny places emphasis on the manner of origin or genesis of rocks. **1966** *Jrnl. The classic system in this regard is 'petrogeny's residua system', $NaAlSiO_4$-$KAlSiO_4$-SiO_2..but..even this is a residua system only for liquids in which the alkali/alumina ratio [*printed* ration] is unity.

Hence **petro'genic** *a.* = PETROGENETIC *a.*

1651 OGILBY *Æsop* (1665) 180 Not in prophaner Arts, like Popish Pigs, To pettitoe-it on the Organs Jigs.

[Note. *Petitoe, -toes*, was in 17th c. taken by some (e.g. Skinner, 1671) as = F. *petite oie* (lit. 'little goose') the giblets of a goose, which is thus given in Cotgrave: '*La petite oye*, the giblets of a Goose; also, the bellie, and inwards or intralls, of other edible creatures.' The extended sense in the second part of this definition is not mentioned by Littré (who has a number of transferred senses of a different kind), and it may really have been an English extension, and may show the actual way in which a word meaning the giblets of a goose was extended to the analogous parts cut off in dressing a pig or other animal. Among these were the feet, to which the pl. *petitoes* would seem naturally to point, and to which it may soon have been appropriated (cf. the quot. from Florio 1598). But if this is the history, it must have taken place within the space of a generation, since the first example of 'a pyges pettytoe' is of 1555, and *pettytoes* was evidently applied to toes or feet by 1589. It is to be noted that Cotgr. has also '*Petitose* [Fr.], the garbage of fowle (an old word)'; but this is not given by Godefroy, and may be some error. It may be worth inquiring whether *petitoe* was not orig. a simple adoption of OIt. *petitto* little, petty, small (Florio), quasi 'pettics', petty items.]

b. Now commonly applied to the fixed benches with backs, each seating a number of worshippers (usually four to six or eight), with which the area of a church or chapel is now usually filled, except for the passages affording access to these seats.

In most churches these have now superseded the earlier 'family pew' (see 2); but in the earlier quotations it is often uncertain which are meant.

[*Note.* The phonological relation of *puwe*, *pywe*, *pewe*, to OF. *puye*, *puie*, offers difficulties. For the sense, cf. 16th c. Dutch (Brabantish) *puye* or *puyde* (which must have been taken from OF.). Plantin 1573 has '*een Puye*, vn lieu enleué au marché, ou contre l'hostel de la ville, pour proclamer arrests, ou publier ordonnances'; Kilian *1599*, '*Puye*, *puyde*, podium, pulpitum, suggestus, suggestum, rostra, suggestus lapideus'; Hexham 1678, '*Puye*, a Pue, or place elevated in a Market, to Proclaim or to Cry of any thing'; cf. mod.Du. *de pui* the front of a town-hall or other building. Of the L. sing. *podium*, Du Cange gives one of the mediæval senses as 'Lectrum, analectrum in ecclesia, ad quod gradibus ascenditur', i.e. a lectern or reading-desk in a church, to which one ascends by steps; in Italian, Florio (1598) has '*poggio*, a hill or mounting side of a hill, a blocke to get vp on horsebacke'. (So occasionally in Eng. *horse-pew* = horse-block: see *N. & Q.* 10th s. IV. 27, 8 July 1905.) These point to the series of senses: base or raised structure to mount or stand on; raised place to stand on in making a public speech or proclamation, 'stump', rostrum; esp. in a church, a raised lectern, reading-desk, pulpit, or the like; whence, generally, place elevated above the floor for any purpose; particularly, sitting place on a raised base. But it is not impossible that this last sense, which seems to be peculiar to Eng., may have originated in that of 'balcony, balustrade' (see the Etymology), esp. if the name was first applied to a range of seats raised against the wall.]

Pfund (fʊnt). *Physics.* The name of A. Herman *Pfund* (1879-1949), U.S. physicist, used *attrib.* to designate a series of lines in the infra-red part of the spectrum of atomic hydrogen, with wave numbers represented by $R(1/5^2 - 1/m^2)$ (where R is the Rydberg constant and $m = 6, 7, \ldots$), of which the first line has a wavelength of 7·46 micrometres and the series limit is at 2·28 micrometres.

1934 H. L. BROSE tr. *Sommerfeld's Atomic Struct. & Spectral Lines* (ed. 3) ii. 73 A. H. Pfund found an infra-red line belonging to hydrogen at $\lambda = 7{\cdot}40\mu$, which is the first member of a 'Pfund series' and corresponds to $n = 5$, $m = 6$. 1970 D. W. TENQUIST et al. *University Optics* II. ii. 43 Lines in the infra-red part of the spectrum are caused by transitions terminating at $n = 3$ (Paschen series), $n = 4$ (Brackett series) and $n = 5$ (Pfund series).

ph, a consonantal digraph, having usually the phonetic value of F. It was the combination used by the Romans to represent the Greek letter *Φ*, *ϕ* or *φ*, named *Φῖ*, *Phī*. This letter, cognate with Skr. *bh* (and so with Germanic *b*), was in early Greek written *ΠΗ*, and was a real aspirated *p*; it was subsequently often written *ΠΦ*, *πϕ*, and had then prob. nearly the same sound as German *pf*; but by the second century

B.C. it had sunk into a simple sound, prob. the *bilabial* spirant (the sound made in blowing through the lips). As the Roman F was dentilabial, like mod. Eng. *f*, the Romans in earlier times represented the Greek Φ not by F, but by PH; in the time of the Emperor Severus, however, the two began to be confused, and from *c* 400 were treated as identical. Hence in late popular and mediæval Latin, and in the Romanic languages, *f* was often substituted, as it is now regularly in Italian and Spanish (e.g. *fantasia, filosofia, Filippo, fotografico*). This was also the case to a great extent in Old French, and in Old and early Middle English (see PHARISEE, PHILISTEE, PHANTOM, PHEASANT); but here, under the influence of the Latin forms, most words so written were subsequently altered back to *ph*, the preponderance of which is particularly notable in Gower. Exceptionally the *f* remains in mod. Eng., as in *fancy* (= *phantasy*), *fantastic*. In all modern words of Greek derivation (e.g. in *phano-*, *philo-*, *phospho-*, *photo-*, *phyto-*) *ph* is alone found.

One consequence of these conditions was that in the 15th, 16th, and 17th c., *ph* was frequently substituted for *f* in words not of Greek origin, esp. in words that were somewhat rare, the scribes apparently taking *ph* as a more learned, and thus presumably more correct, spelling. Many instances of this will be found under F, and among the cross-references given below, as in *phalucca, phan, phane, phang, pharman, philaser, philhorse, philimot*, etc. This spelling is often retained in *philabeg* = *filibeg*, and in certain interjections, *phew! pho! phoo!* where perhaps it may have been adopted to express the simple bi-labial ('lip-breath') consonant (the sound made in blowing) as distinct from the labio-dental *f*. Modern phonologists, e.g. Mr. A. J. Ellis in his 'Palæotype', have used *ph* as the symbol of the bi-labial sound. Greek had the initial combination *φθ-*, in Roman spelling *phth-*. This was difficult for the Romanic nations, and in the only early word of this class, *phthisicus*, was reduced to *pht*, *th*, or simple *t*. See PHTHISIC, etc. In mod.F. words in *phth* are now normally pronounced *ft-*; in Eng. the *ph* is generally mute and the *th* pronounced; but in scientific words many scholars pronounce (fθ-), a combination which is quite as easy as (sf-) in *sphere*.

Ph (pronounced *f*) is also used to represent Hebrew פ (without dagesh), and even initial פּ (according to the Masoretic pointing, with dagesh) in proper names which have come to us through a Greek form with Φ: see PHARAOH, PHILISTINE, SERAPH. In the Roman spelling of Indian languages *ph* represents the true aspirated *p* (फ of Sanskrit), and this is occasionally the origin of *ph* in alien words: cf. PHULKARI.

pH (pi:'eɪtʃ). Formerly p_H, PH. [Introduced (in Ger.) as p_H by S. P. L. Sörensen 1909, in *Biochem. Zeitschr.* XXI. 134, the *p* repr. G. *potenz* power and H· the hydrogen ion.]

1. A measure of the acidity or alkalinity of a solution, equal to the logarithm to the base 10 of the reciprocal of the effective concentration (activity) of hydrogen ions (in moles per litre).

A pH of 7 corresponds to a neutral solution, one less than 7 to an acidic solution, and one greater than 7 to an alkaline solution.

1898 W. S. L. BARLOW *Man. Gen. Path.* ix. 403 Attack directed from the German schools and advancing knowledge have obliged Metchnikoff to assume that under certain circumstances the phagocytes become dissolved (phagolysis) in the body fluids. *Ibid.*, The phagocytes, chiefly by phagocytosis, but partly by phagolysis, are responsible for immunity, natural and acquired. **1905** F. G. BINNIE tr. *Metchnikoff's Immunity in Infective Dis.* x. 534 Phagolysis (so I termed this transitory damage to the phagocytes) is indispensable for the manifestation of Pfeiffer's phenomenon in the peritoneal fluid. **1963** *Antibiotiki* VIII. 465 (*heading*) Effect of Levomycetin..on phagolysis of Flexner dysentery bacteria resistant to this antibiotic.

phagolysosome (fægəʊ'laɪsəʊsəʊm). *Biol.* [f. next + LYSOSOME.] A structure formed in the cytoplasm of a cell by the fusion of a phagosome and a lysosome, in which the foreign particle is digested.

1963 W. STRAUS in de Reuck & Cameron *Lysosomes* 166 The term 'phagosomes' was used to characterize the segregating ability of granules; the term 'lysosomes' was used to indicate the contents of hydrolytic enzymes in the granules.., and the terms 'lyso-phagosomes' or 'phago-lysosomes' were used when both these properties were described for the same granules. **1964** *Jrnl. Histochem. & Cytochem.* XII. 470/2 The foreign protein..was segregated in small and large 'phagosomes'. These later fused with pre-existing lysosomes. The gradual digestion of the injected protein in the 'phago-lysosomes'..could be followed by double staining. **1973** R. G. KRUEGER et al. *Introd. Microbiol.* xxiii. 584/1 The phagolysosome, containing the remains of the foreign object is then either eliminated from the cell or is left in the cytoplasm. **1977** *Lancet* 29 Oct. 929/2 These organelles are probably secondary lysosomes (phagolysosomes), common in actively feeding cells.

Hence ˌ**phagolyso'somal** *a.*

1975 *Nature* 3 July 48/2 The phagolysosomal membrane was invariably applied closely to the surface of the enclosed yeast cell.

phagosome ('fægəʊsəʊm). *Biol.* [f. PHAGOCYTE + -SOME⁴.] A vacuole formed in the cytoplasm of a cell when a particle is phagocytosed and enclosed within a part of the cell membrane.

1958 W. STRAUS in *Jrnl. Biophysical & Biochem. Cytol.* IV. 548 The uptake of proteins is probably the function of certain intracellular granules related to the droplets of kidney cells. The term 'phagosomes' is suggested for these granules. (If these granules, characterized by segregating ability, are found to be identical with the 'lysosomes', the latter term can be used as a common nomenclature.) **1974** *Nature* 22 Nov. 305/2 If these processes engage in phagocytosis, phagosomes containing groups of cone disks should be observed within their cytoplasm.

Hence **phago'somal** *a.*

1975 *Nature* 17 Apr. 600/2 Possibly the living bacteria produce a factor which inhibits fusion between phagosomal and lysosomal membranes and thereby prevent the discharge of putatively bactericidal lysosomal contents into the bacterial environment.

It results from this that *phases* is the written pl. both of *phasis* and of *phase*, and that in many instances it is not possible to say to which singular it is meant to belong.]

phasitron ('feɪzɪtrɒn). *Electronics.* [f. PHAS(E + -I- + -TRON.] An electron tube suitable for phase-modulating a wave by large amounts, in which a pattern of beams emitted radially from a central cathode passes through a slotted cylindrical anode to a coaxial second anode, the pattern of beams being both rotated at a steady rate by a three-phase supply and modulated by a varying axial magnetic field that advances and retards the beams and thereby also the phase of the current at the second anode.

1946 *Electronics* Oct. 108/2 The carrier frequency.., after one stage of amplification, is used to drive a phase-splitting network to provide three-phase voltages for the input deflector grids of a 'Phasitron' tube. *Ibid.* 111/2 Since the Phasitron is modulated by a magnetic field, fields other than those produced by the audio input will cause noise modulation of the carrier. **1966** *McGraw-Hill Encycl. Sci. & Technol.* V. 514/1 An improvement in the phase-modulation method is provided by a special tube called the phasitron, which is capable of increasing the amount of phase shift.

pheme (fi:m). [ad. Gr. *φήμη* words, speech.] A term used by the American philosopher, C. S. Peirce (1839–1914), for words in an utterance as they make up a grammatical unit in language, contrasted with words used in speech to convey sense (see RHEME, SEME).

1906 C. S. PEIRCE in *Monist* XVI. 506 By a *Pheme* I mean a Sign which is equivalent to a grammatical sentence, whether it be Interrogative, Imperative, or Assertory... Such a Sign is intended to have some sort of compulsive effect on the interpreter of it. **1923** OGDEN & RICHARDS *Meaning of Meaning* 438 We are introduced to Semes, Phemes, and Delomes. **1931** G. STERN *Meaning & Change of Meaning* iii. 31 Meaning is a property peculiar not only to what we traditionally call words, but also to parts of words, *e.g.* the genitive ending in *man's* ... As a comprehensive term .. Vendryes .. has proposed *sémantème*, and C. S. Peirce, quoted by Ogden-Richards .. has *seme* and *pheme*. **1955** J. L. AUSTIN *How to do Things with Words* (1962) viii. 97 The same pheme (token of the same type) may be used on different occasions of utterance with a different sense or reference, and so be a different rheme. ... phen-, pheno-, formative element in *Chem.*, (for *phæn(o-)* f. Gr. *φαινο-* shining, *φαίν-ειν* to bring to light, cause to appear, show; *φαίν-εσθαι* to come to light, appear. First used by the French chemist Laurent, 1841, in 'hydrate de phényle' and 'acide phénique', names which he applied to the substance subsequently called PHENOL. These names referred to the fact that the substance was a coal-tar product, arising from the manufacture of *illuminating* gas. Hence *phen-*, *pheno-* was gradually used as the basis of the names of all the bodies derived from benzene (i.e. phenyl hydride, which French chemists proposed to call *phène*). See PHENE, PHENIC, PHENOCOLL, PHENOL, etc. below; also the following:

pheromone (ˈfɛrəʊməʊn). *Biol.* [f. Gr. *φέρ-ειν* to convey + -O + *ὁρμῶν*, pres. pple. of *ὁρμᾶν* to set in motion, urge on (after *hormone*).] Any substance that is secreted and released by an animal (usu. in minute amounts) and causes a specific response when detected by another animal of the same (or a closely related) species.

1959 KARLSON & LÜSCHER in *Nature* 3 Jan. 55/2 We propose..the designation 'pheromone' for this group of active substances... Pheromones are defined as substances which are secreted to the outside by an individual and received by a second individual of the same species, in which they release a specific reaction, for example, a definite behaviour or a developmental process... Having stated that pheromones act on individuals of the same species, they must be differentiated from other stimulating substances, like..scents of flowers and insect repellents... Strict species-specificity is not required; certain overlaps between closely related species may occur. **1962** *New Scientist* 19 Apr. 86/2 The queen substance of honey-bees, which inhibits ovary development and profoundly affects behaviour in workers, is a pheromone; and pheromones of various kinds are supposed to affect caste differentiation and colony structure in termites. **1965** *Listener* 14 Jan. 57/2 Our observation of ant colonies..has led us to believe that as few as ten pheromones, transmitted singly or in combination, might suffice for the total organization of ant society. **1971** *Nature* 17 Dec. 415/2 We now describe a case in which male attraction to females of the same species is inhibited by a pheromone emitted from females of a closely related species. Our tests were conducted with the Indian meal moth *Plodia interpunctella* (Hübner) and the almond moth *Cadra cautella* (Walker), both phycitid species. **1973** H. O. BOX *Organisation in Animal Communities* viii. 200 Examples..include the blocking of pregnancy in the females of some strains of mice by a pheromone in the urine of a strange male mouse. **1975** D. S. HILL *Agric. Insect Pests of Tropics* iii. 23 Behavioural control with several types of pheromone may be possible, but attention has been focused on pheromones causing aggregation for mating, feeding or oviposition. **1977** *Sci. Amer.* May 104/3 It now appears that certain insects take chemicals from the plants they eat, store the chemicals and later emit them for defense, as 'aggregation pheromones' or perhaps as sex attractants.

Hence **phero'monal** *a.*, of, pertaining to, or being a pheromone or pheromones.

1959 *Ann. Rev. Entomol.* IV. 39 Pheromonal secretion need not occur in definite glands (though that is the case normally). **1971** *New Scientist* 25 Feb. 413/1 Much of this would be speculation alone if research had not produced an intriguing instance of human communication which might just possibly prove to be pheromonal. Recently, Dr Martha McClintock of Harvard..has investigated the menstrual cycles of women students in a hall of residence... Her investigation threw up the bizarre observation that, precisely as in mice, the cycles of close friends..fall into synchrony. **1971** *Nature* 16 Apr. 432/1 Odour fingerprinting techniques and gas chromatography now make the detection and preparation of human pheromonal agents feasible if they exist. **1975** *Sci. Amer.* May 59/1 The physiological causes, possibly pheromonal ones, for the synchrony of births remain to be determined, and it will not be easy to determine them with lions in the wild.

3. *Nuclear Physics.* In full *phi meson.* A neutral meson that has the same quantum numbers as the omega meson (OMEGA 3 b), is observed as a resonance, has a mass of 1019 MeV (1995 times that of the electron), and on decaying usu. produces two kaons or three pions. Freq. written ϕ.

1962 J. J. SAKURAI in *Physical Rev. Lett.* IX. 472/1 In a recent issue of this journal a Brookhaven-Syracuse group reports the possible presence of a narrow resonance ($\Gamma \approx 20$ MeV) in the $K\bar{K}$ system with mass $\approx$1020 MeV in the reactions $K^- + p \rightarrow K^+ + K^- + \Lambda$, $K^0 + \bar{K}^0 + \Lambda$. In discussing the quantum numbers of the resonating $K\bar{K}$ pair, which we tentatively refer to as the ϕ meson, [etc.]. *Ibid.* 474/1 We would like to suggest that this discrepancy is due to mixing between ω and ϕ arising from the fact that the ω and ϕ have the same quantum numbers as far as spin-parity, isospin, and G-parity are concerned. **1968** J. BERNSTEIN *Elem. Amer.* July 100/2 Three vector mesons with zero strangeness are currently known: the rho, the omega and the phi. **1974** *Nature* 6 Dec. 438/2 Another well established meson, called the phi, also has electromagnetic decays to e^+e^-. **1975** *Sci. Amer.* Oct. 48/2 Zweig's rule was formulated to explain the decay of the phi meson, which is made up of a strange quark and a strange antiquark and has a mass of about 1 GeV. The two particles are closely analogous, but the decay of the J is appreciably slower than that of the phi.

phil-, form of PHILO- used before a vowel or *h.*

-phil (fɪl), **-phile** (faɪl), combining element repr. Gr. *φίλος* loving, dear. In Greek, found only in certain personal names, where it means 'dear, beloved', as *Διόφιλος* (dear to Zeus), *Θεόφιλος* (dear to God). In med. and mod.L. often used as a second element in form *-philus*, *-phila*, with sense 'lover, loving' (e.g. *botanophilus* (Linn.) lover of plants, amateur botanist, *Ammophila*, generic name). Hence in French words *-phile*, in Eng. *-phile* or later *-phil*, as *Anglophil(e*, *Russophil(e*, *Slavophil(e*, *Turcophil(e*, for which forms with the prefix PHILO- are more correct etymologically; so *conchophil(e* (shell-loving), *gastrophil(e*, *oxyphil(e*, etc.; *spec.* in *Biol.* and *Med.* in the sense 'having an affinity for (a certain substance or class of substances)', as in EOSINOPHIL *a.* and *sb.*, *neutrophil(e* adj. and sb. philo- (fɪləʊ), before a vowel (or *h*) usually **phil-** (fɪl), repr. Gr. *φιλο-*, *φιλ-*, combining form from root of *φιλ-εῖν* to love, *φίλ-ος* dear, friend (cf. *μισο-*, *miso-*, from *μῖσ-εῖν* to hate, *μῖσ-ος* hate, hatred). The number of compounds so formed in Greek was very great; usually they were adjs., having derived sbs. and other words, and capable themselves also of being used as sbs.; e.g. *φιλόσοφος* loving wisdom, a lover of wisdom, whence *φιλοσοφία*, *φιλοσοφικός*, *φιλοσοφεῖν* to philosophize, etc.; *φίλορνις* fond of birds, *φιλορνῑθία* fondness for birds, etc. Among these were some formed on national names, as *φιλέλλην* loving the Hellenes or Greeks, *φιλολάκων* loving the Lacedæmonians. Many of the Greek compounds have come down (frequently through Latin, and usually with formative suffixes) into English; and, on the model of these, *philo-* (*phil-*) has been employed to form new compounds, the second element of which is properly Greek, but often Latin, and even, esp. in nonce-words, English or in Eng. use. *Philo-* has thus become a living element, esp. with national names, as *philo-German*, *philo-Russian*, *philo-Turk*, and the like.

Examples are: *phil-aristocracy*, *-athlete*, *-athletic* [cf. Gr. *φιλαθλητής*], *-hymnic* [Gr. *φίλυμνος*] (loving hymns), *-orthodox*; *philo-botanic*, *-botanist*, *-cathartic*, *-catholic*, *-dramatic*, *-dramatist*, *-felon*, *-garlic*, *-irenist*, *-mathematic(al*, *-musical*, *-mystic*, *-mythology* (love of fables), *-mythy* [Gr. *φιλομυθία* love of talk], *-pagan*, *-peristeronic* (pigeon-fancying), *-pig*, *-poet*, *-publican*, *-radical*, *-tadpole*, *-theorist* [cf. Gr. *φιλοθέωρος*], etc. Among those formed on national names are *phil-African*, *-Arabian*, *-Arabic*, *-Athenian*; *philo-Athenian* [cf. Gr. *φιλαθήναιος*], *-French*, *-Gallic* (*-ism*), *-German* (*-ism*), *-Greek*, *-Hindu*, *-Jew*, *-Laconian* [Gr. *φιλολάκων*], *-Peloponnesian*, *-Pole*, *-Polish*, *-Slav*, *-Teuton* (*-ism*), *-Turk* (*-ish*, *-ism*), *-Yankee* (*-ist*), *-Zionist*, etc. Among humorous nonce-words are *philo-destructiveness*, *-financitive*, *-foxhuntingness*, *-legislativeness*, in ridicule of the phrenological *philoprogenitiveness*.
